Johannes Christopher O. Cortez

AI Automation Specialist | AI Agent Builder | Robotics Operations

New Manila, Quezon City, PH · jccortez152@gmail.com · github.com/jccortez152-web · johannescortez.vercel.app

PROFESSIONAL SUMMARY

AI automation specialist who builds production AI agents inside a live, safety-critical robotics operation spanning hospitals and hotels worldwide. Designs agents that watch live robot logs and flag issues in real time, Claude Skills that automate case triage and QA, and n8n workflows that connect Salesforce, Gmail, and Slack, several adopted or extended at engineering leadership's request. Pairs hands-on Linux and fleet diagnostics with managed services experience on Microsoft's global helpdesk (Entra ID, Intune, M365) and full-stack Next.js/Supabase development.

CORE SKILLS

- **AI & Automation:** LLM APIs (Anthropic, OpenAI) · Claude Code · Claude Skills · MCP · RAG & AI Agents · Prompt Engineering · n8n · Make.com · Slack Bolt · Cursor
- **Full-Stack Development:** Next.js · React · Supabase · Tailwind CSS · Vercel · REST APIs · Server-Sent Events
- **Robotics & Linux:** SSH · tmux · journald/syslog diagnostics · ROS · rosbag debugging · packet analysis · fleet monitoring · embedded systems
- **Identity, Endpoint & M365:** Entra ID (Azure AD) · Intune · Conditional Access · MFA · VPN · Quick Assist · BitLocker · Exchange Online · Teams · OneDrive/SharePoint
- **Ops & Enterprise Platforms:** Salesforce · ServiceNow (ITIL) · Grafana/Loki · Confluence · GoHighLevel · Monday.com · Slack · Git · Google Workspace

PROFESSIONAL EXPERIENCE

Relay Robotics — Robot Care Specialist | AI & Automation *Dec 2024 – Present*

- Provide remote technical support for a global fleet of autonomous delivery robots in hospitals and hotels, diagnosing live faults across navigation, connectivity, sensors, docking, and elevator and door integrations using SSH, Linux logs, Grafana/Loki, and rosbag analysis.
- Remotely support field technicians during robot installs, hardware swaps, and site commissioning, guiding them through diagnostics, elevator integration, and network setup in real time.
- Perform post-mortem analysis on incidents, reconstructing robot behavior from logs and rosbag data to pinpoint root causes and hand engineering clear, evidence-backed findings.
- Design and ship internal AI agents and automations (live SSH log-monitoring agents, Claude Skills, n8n workflows), several sanctioned or extended at engineering leadership's request.
- Built RoboChat, a zero-install mobile chat widget that replaced daily customer follow-up calls and cut escalations caused by communication delays.
- Author KB articles and weekly fleet-wide technical updates so fixes are standardized across shifts.
- Partner with engineers and Solutions Architects on complex investigations, documenting each trace so the team can close similar cases independently.
- **Award:** Top performer for customer satisfaction and commendations.

DXC Technology — Technical Solutions Representative III, Microsoft Global Helpdesk (Managed Services) *Oct 2023 – Dec 2024*

- Delivered managed service support for Microsoft's global workforce under client SLAs in a high-volume queue.
- Resolved Entra ID identity issues: account lockouts, password resets, MFA registration, and sign-in failures traced through sign-in logs.
- Supported Intune-managed devices: enrollment and compliance failures, app deployments, policy sync, and Conditional Access blocks.
- Troubleshot corporate VPN connectivity, certificate and authentication errors, and remote network issues; delivered live remote support through Quick Assist and Teams.
- Resolved Microsoft 365 issues across Outlook, Exchange Online, Teams, OneDrive, and SharePoint, plus Windows OS repair, malware removal, and BitLocker recovery.
- Managed incidents and service requests in ServiceNow following ITIL, escalating to resolver groups with reproducible findings and analyzing recurring trends to reduce repeat tickets.
- **Award:** Top-performing technician with the highest customer commendations for three consecutive quarters.

Ignite Careers PH — Front-End Web Developer Intern *2021*

- Built responsive interfaces in HTML, CSS, and JavaScript, shipping against project deadlines with stakeholders.

AI AGENTS & AUTOMATION SYSTEMS BUILT

Live Fleet-Monitoring Agent · Claude Code, SSH, n8n

- Built a real-time agent that watches a robot's live logs the moment a delivery starts and surfaces anomalies as they happen, closing the gap between an alert and seeing its cause.
- Designed a credential-separation architecture: a personal SSH session streams logs to a local file that Claude Code's Monitor tool watches, so the agent holds no robot credentials. Got engineering sign-off to extend it from a test robot to production units.
- Built "tandem," a tmux + Claude Code tool that lets Claude drive a live SSH session for deeper investigations, modeled on an internal engineering tool.
- Prototyped the first always-on version as a per-delivery n8n workflow and demoed it live to engineering leadership.

Autonomous Case-Queue Agent · Anthropic SDK, Python

- Built a continuous-loop agent that self-triggers on a timer to pick up new cases from the support queue, backing off automatically when the queue is empty.

Ops Automation Suite · n8n, Gmail, Slack, Salesforce

- Built a Gmail-to-Slack workflow that closed a Salesforce blind spot (no alert on customer replies), using sender-domain and header logic to detect genuine replies.
- Extended it to flag cases untouched for 48+ hours or that appear deleted, via a scheduled report parsed and diffed outside Salesforce admin access.

Claude in Chrome & Slack Monitoring · Claude in Chrome, Grafana, Slack

- Built a skill that monitors two production robots by walking Grafana logs and the live Admin Portal map and camera when a delivery starts, triggered by a custom Grafana Slack alert.
- Shipped a dedicated Slack alerting channel watching a hospital site's failed and cancelled deliveries live, ahead of the team's official monitoring rollout.

Team Performance Dashboard

- Built a CSV-upload dashboard showing each agent's case count against the team average, mapped to management's 5-tier performance scorecard.

CLAUDE SKILLS AUTHORED (PRODUCTION)

RoboCare Specialist Skill · Claude Skills, Atlassian Rovo MCP, Confluence, Slack MCP

- Encodes the full diagnostic decision tree and escalation logic into one Claude skill, so frontline specialists can handle advanced, escalation-level work. Searches, creates, and publishes Confluence KB articles directly from Slack threads or case history.

Salesforce Case Filler Skill · Claude Skills, Claude in Chrome, Salesforce

- Reads a Salesforce case in Chrome, parses the subject and comments, and fills all required categorization fields. Replaced a manual 2–3 minute task per case and runs in single-case or full-queue batch mode.

QA Case Audit Skill · Claude Skills, Python, ReportLab, openpyxl

- Audits Salesforce case exports by checking whether categorization matches the case comments, scoring each case out of 100 and generating per-agent PDF QA reports. Now maintained by a teammate.

PORTFOLIO PROJECTS

- **RoboChat:** mobile-first async chat replacing daily follow-up calls to nurses, with an SSE layer between Next.js and Slack Bolt for sub-second relay and Supabase-backed audit trail.
- **Reimbursement Portal:** one-click approval workflow replacing a spreadsheet-and-email chain, with Resend status emails and a full audit trail for quarter-close.
- **Internal Employee Store:** company-currency rewards storefront with admin inventory and balance tooling in one auditable system.
- **Custom CRM** (crm-project-pied.vercel.app): contacts, kanban pipeline, activity timeline, Resend email, audit log, and Facebook/Instagram lead capture via Zapier.
- **Content Pipeline App:** content production management for social media manager clients.
- **Shore Link Outbound (GoHighLevel):** recreated a real company's outbound system with a CRM pipeline and a 5-day automated B2B email sequence.

EDUCATION & CERTIFICATIONS

BS Computer Engineering — University of the East, Manila *2018 – 2023*

- **Award:** Distinction for Best Design Project, engineered an IoT-based Smart Garden system.

Certifications: Huawei Certified ICT Associate – IoT · ITIL · Microsoft 365 Fundamentals · Network Security · Journey to the Cloud & TDD · Basic React.js · Arduino Virtual Workshop

Continuous learning: Maintains a Salesforce Developer Edition org, rebuilding production case-automation flows to sharpen admin and dev skills.
